Clot-Busting Drug THR-100 (Staphylokinase) Enters Phase III Clinical Trials in India

*Thrombolytic Agent for Treatment of Myocardial Infarction
Being Developed for Emerging Markets by Bharat Biotech*

Leuven, Belgium and Hyderabad, India – 4 February 2011 – ThromboGenics NV (Euronext Brussels: THR), a biopharmaceutical company focused on the discovery and development of innovative treatments for eye disease, vascular disease and cancer, announces that its partner, Bharat Biotech International Limited (Hyderabad, India), has initiated a Phase III trial in India with THR-100 in patients suffering an acute myocardial infarction (AMI or heart attack). Bharat Biotech is a leading innovator and manufacturer of vaccines and biologics with focus on emerging markets. The trial is expected to recruit approximately 120 patients.

THR-100, a novel variant of Recombinant Staphylokinase, is a thrombolytic agent developed by ThromboGenics for the treatment of AMI and other vascular diseases, based on its ability to dissolve blood clots. In December 2006, ThromboGenics and Bharat Biotech entered into a license agreement for the manufacture, clinical development and commercialization of THR-100 with the objective of potentially commercializing THR-100 as a replacement for established thrombolytics, such as streptokinase and urokinase, in developing markets. Under the terms of the agreement, ThromboGenics will receive double digit royalties on net sales.

Bharat Biotech anticipates that the Phase III trial with THR-100 will be completed in the second half of 2011. The results of this Phase III trial will pave the way for this novel thrombolytic to be filed for marketing approval by Bharat Biotech with Indian regulatory authorities.

About ThromboGenics

ThromboGenics is a biopharmaceutical company focused on the discovery and development of innovative medicines for the treatment of eye disease, vascular disease and cancer. The Company's lead product ocriplasmin (microplasmin) has completed two Phase III clinical trials for the pharmacological treatment of symptomatic vitreomacular adhesion (sVMA). Ocriplasmin is also being evaluated in Phase II clinical development for additional vitreoretinal conditions. In addition, ThromboGenics is developing novel antibody therapeutics in collaboration with BioInvent International; these include TB-402 (anti-Factor VIII), a long acting anti-coagulant in Phase II, and TB-403 (anti-PIGF) in Phase Ib/II for cancer in partnership with Roche.

ThromboGenics is headquartered in Leuven, Belgium. The Company is listed on NYSE Euronext Brussels under the symbol THR. More information is available at www.thrombogenics.com.

About Bharat Biotech

Bharat Biotech International Limited, Hyderabad, India, is a multidimensional biotechnology company specializing in innovation for emerging markets, manufacture of vaccines and biotherapeutics. Bharat Biotech, established in 1996, is engaged in developing next-generation vaccines and biotherapeutics through innovative and collaborative research.

Bharat Biotech is one of the first bio-pharma facilities in India to be audited and approved by Korean Food & Drugs Administration (KFDA). Bharat Biotech is also a WHO prequalified manufacturer of Hepatitis-B vaccines for supply to UNICEF and global procurement agencies. Bharat Biotech is one of the largest manufacturer of anti-rabies vaccines in India. INDIRAB® is a market leader in India and several countries globally. Bharat Biotech also manufactures vaccines for typhoid, polio, and pentavalent combination vaccines. Bharat Biotech is a market leader in wound healing segment with its REGEN-D, epidermal growth factor for diabetic foot ulcers, burns and wound healing. www.bharatbiotech.com
