About Oxurion

Oxurion (Euronext Brussels: OXUR) is a biopharmaceutical company focused on transforming treatments to preserve vision in patients with diseases affecting the back of the eye. The company is currently developing a competitive pipeline of disease-modifying drug candidates for diabetic eye disease, a leading cause of blindness of people of working age worldwide.

Oxurion's most advanced drug candidate is THR-317, a PIGF inhibitor for the treatment of diabetic macular edema (DME), which is currently in a Phase 2 study in combination with Lucentis[®]. THR-317 is also being evaluated in a Phase 2 study for the treatment of Idiopathic Macular Telangiectasia Type 1 (MacTel 1), a rare retinal disease that affects the macula and can lead to vision loss.

Oxurion has two further pipeline candidates, THR-149, a plasma kallikrein inhibitor being developed for the treatment of DME; and THR-687, a pan-RGD integrin antagonist in development for the treatment of diabetic retinopathy and DME. Both THR-149 and THR-687 are in Phase 1 clinical studies.

Oxurion is headquartered in Leuven, Belgium, and is listed on the Euronext Brussels exchange under the symbol OXUR.
